Screening/assessment Cardiovascular disease	How often?	Who?	Page* 10-14 15-1	7 18–19 20–24 25–29 3		40–44 45–4	19 50–54 ≥5
Assess smoking status, physical activity, nutrition, BMI, waist circumference Assess smoking status, physical activity, nutrition, BMI, waist circumference,		People aged 12–17 years People aged 18–29 years without vascular risk factors	89				
blood pressure (BP), family history of premature CVD, diabetes risk and psychosocial and socioeconomic risk factors	Armaliy and opportunistically	People aged 16-29 years without vascular risk factors	89				
Assess above and serum lipids and screen for chronic kidney disease (CKD)	Annually and opportunistically	People aged 18–29 years with either family history of premature CVD or CKD, overweight, smoking, diabetes, elevated BP	89				
Assess for Framingham and non-Framingham risk factors and clinically high-risk conditions (refer to Chapter 11: Cardiovascular disease prevention)	Annually	People aged 30–74 years	89				
	Annually	People aged 30–74 years in communities where local risk factor prevalence rates and CVD incidence rates are high (eg remote areas)	90				
Chapter 11: Cardiovascular disease prevention)	Review risk every two years	People with low absolute five-year CVD risk (<10%)	90				
•	Review according to clinical context	People with moderate or high absolute five-year CVD risk (>10%)	90				
lipids levels) and recommend commencing BP-lowering treatment	Review according to clinical context	People at moderate absolute CVD risk: 10–15% five-year CVD risk	91				
and/or lipid-lowering medication unless contraindicated (refer to Chapter 11: Cardiovascular disease prevention) Recommend commencing both a BP-lowering medication and	Review according to clinical context	People at high absolute CVD risk: >15% five-year CVD risk or					
lipid-lowering medication regardless of risk factor levels unless contraindicated (refer to Chapter 11: Cardiovascular disease prevention)		presence of any clinically high-risk conditions	91				
	Annually	People aged ≥ 18 years and/or adults with any high-risk conditions	94				
glycosylated haemoglobin (HbA1c) Consider testing according to clinical context	Opportunistically	People aged <18 years with overweight/obesity	94				
	Annually	People aged 18–29 years without CKD risk factors	96				
	Two-yearly (more frequently if CKD risk factor	People aged 18–29 years with risk factors (refer to Chapter 13:					
albumin-creatinine ratio (ACR) Sexual health and blood-borne viruses	present)	Chronic kidney disease prevention and management); all people aged ≥30 years	96				
General advice	Appually and to garage three months after	All people with right factors for CTI or PDV all poverally active people					
	Annually and re-screen three months after positive test Upon diagnosis and re-screen in three months	All people with risk factors for STI or BBV; all sexually active people aged ≤30 years People diagnosed with an STI	99				
Contact tracing	Every positive screen	Sexual partners of a person with an STI	99				
Sexually transmitted infections Chlamydia Recommend puckers acid amplification test (NAAT) (refer to Chapter 14:	Annually	People aged 15_20 years if sow talks notice					
Sexual health and blood-borne viruses)	Annually Annually First visit	People aged 15–30 years if sexually active People aged ≥30 years if sexually active and at high risk					
	First visit First visit and third trimester	All pregnant women Pregnant women at high risk of STI	101				
	Opportunistic Annually or 3–6-monthly if high risk	Women who are having a termination of pregnancy Men who have sex with men					
and blood borns viruses)	Annually	Sexually active people aged 15–30 years					
	Annually Annually or 3–6-monthly if high risk	Pregnant women who are at risk Men who have sex with men	101				
Trichomonas vaginalis	Annually	All people aged ≥30 years if sexually active and at high risk					
viruses)	Opportunistically	Sexually active people aged ≤30 years where local prevalence rates are high or in regional/remote areas	101				
	First antenatal visit and repeat at 28 weeks if	All pregnant women					
	positive, in a high prevalence area, or risk factors for STIs are present	Man who have say with many others at high risk of CTI	101				
Blood-borne viruses	Annually or 3–6-monthly if high risk	Men who have sex with men; others at high risk of STI	101				
HBV Hepatitis B vaccination (refer to Chapter 14: Sexual health and bloodborne viruses)			102				
,	Within 72 hours (or 14 days for sexual contact)	Individual exposed to person who is HBsAg positive or who is at high risk and unable to be identified and tested rapidly	102				
Offer HBV screening, including hepatitis B virus surface antigen (HBsAg) and hepatitis B surface antibody (HBsAb)	Opportunistically	Non-vaccinated or unknown vaccine status; people at high risk for BBVs; healthcare workers	103				
Human papilloma virus (HPV) HPV vaccination (also refer to Chapter 15: Prevention and early	As per The Australian immunisation handbook	Young people prior to first sexual activity; women who are sexually	400				
detection of cancer, recommendations for cervical cancer) Hepatitis A virus		active; females who are sexually active and not yet vaccinated	103				
Hepatitis A vaccination if non-immune	Two doses at zero and six months	Men who have sex with men; injecting drug users; people with chronic HBV and HCV infection	103				
HCV HCV serology testing	Annually and opportunistically	People at high risk of contracting HCV	103				
HIV serology testing	First antenatal visit	All pregnant women	103				
Cancer	3–6-monthly	Men who have sex with men; others at high risk of BBVs	103				
Cervical Promote HPV vaccination for prevention of cervical cancer	As per NIPS	All people aged 9–18 years, ideally age 11–13 years, prior to onset					
		of sexual activity Women and men aged >19 years only if individual risk and benefit	105				
4-valent human papilloma virus (4vHPV) vaccine (not subsidised; refer to	As per The Australian immunisation handbook	Assessment indicates Men who have sex with men, but should take into account likelihood of post exposure to HDV and rick of future exposure.	105				
	From age 25 years or two years after sexual activity, whichever is later, and regardless of HPV vaccine status	of past exposure to HPV and risk of future exposure Asymptomatic women aged 25–69 years who have ever been sexually active	105				
	Exit test for age 70–74 years	Asymptomatic women aged 70–74 years who have ever been sexually active	105				
Refer to Chapter 15: Prevention and early detection of cancer, cancer for asymptomatic under-screened women and women with recent			106				
abnormal Pap smears Liver							
Screen for HBV and HCV if indicated	At birth, and at two, four and six months Refer to Chapter 14: Sexual health and blood-borne	All people All people	107				
	viruses, 'Recommendations' Six-monthly	People with chronic hepatitis B who are: aged >50 years, or have cirrhosis, or have a family history of HCC	107				
, , , , , , , , , , , , , , , , , , , ,	Protocols vary, refer to guidelines	cirrhosis, or have a family history of HCC People with advanced liver disease (cirrhosis) not due to chronic hepatitis B	107				
Breast Ask about family history of breast cancer to ascertain individual risk, and	Annually	All women					
discuss 'breast awareness' Recommend mammography screening and provide information to allow	•	Women aged 50–74 years at, or slightly above, average risk	109				
an informed decision based on individual risk and preferences	Annually	Women at potentially high risk	109				
genetic testing and development of a management plan Colorectal (bowel)			100				
individual risk of developing colorectal cancer							
Screen according to risk category (1, 2 or 3); refer to Chapter 15:	Annually	All people	112				
Prevention and early detection of cancer, 'Recommendations: Prevention and early detection of colorectal (bowel) cancer'	Annually	All people	112				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range,	,	All people All people	112				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre	,						
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre Prostate Recommend individualised discussion with patient based on	,	All people Asymptomatic men at average and potentially higher risk due to family	112				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre Prostate Recommend individualised discussion with patient based on assessment of risks and benefits Lung	Annually If requested	All people Asymptomatic men at average and potentially higher risk due to family history (refer to Chapter 15: Prevention and early detection of cancer)	112				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre Prostate Recommend individualised discussion with patient based on assessment of risks and benefits Lung Provide lifestyle risk factor counselling on the benefits of avoiding smoking and exposure to smoke	Annually	All people Asymptomatic men at average and potentially higher risk due to family	112				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre Prostate Recommend individualised discussion with patient based on assessment of risks and benefits Lung Provide lifestyle risk factor counselling on the benefits of avoiding smoking and exposure to smoke Family abuse and violence Establish a high level of awareness of the risks of FAV and actively	Annually If requested	All people Asymptomatic men at average and potentially higher risk due to family history (refer to Chapter 15: Prevention and early detection of cancer)	112 113				
Prevention and early detection of colorectal (bowel) cancer' Provide lifestyle risk factor counselling on the benefits of regular physical activity, maintaining healthy weight, alcohol intake in the low-risk range, restricting energy intake and dietary fat (refer to Chapter 1: Lifestyle), including the consumption of vegetables and sources of dietary fibre Prostate Recommend individualised discussion with patient based on assessment of risks and benefits Lung Provide lifestyle risk factor counselling on the benefits of avoiding smoking and exposure to smoke Family abuse and violence Establish a high level of awareness of the risks of FAV and actively	Annually If requested Annually and opportunistically Opportunistic and as part of an annual health assessment	All people Asymptomatic men at average and potentially higher risk due to family history (refer to Chapter 15: Prevention and early detection of cancer) All people	112 113 116 117
