Morning tea, lunch and
afternoon tea provided

Expand your knowledge and skills for skin cancer management.

This comprehensive full-day workshop examines a broad range of skin cancers frequently seen in general practice. The theoretical component of this workshop will help to improve your decision-making skills in the identification, differentiation, management and referral of patients with melanoma and non-melanoma skin cancers.

This is followed by a hands-on procedural skills session, which focuses on a range of biopsy and suturing techniques, excision margins and wound management – building your confidence to expand your scope of practice and provide better patient outcomes.

Learning outcomes

1. Apply the Diagnostic Algorithm and 3-Point Checklist in differentiating benign from malignant skin lesions.
2. Describe the features of non-melanoma and melanoma skin cancers
3. Develop a comprehensive primary care surveillance and management plan for patients diagnosed with skin cancer
4. Recognise the most appropriate biopsy/suturing technique based on lesion type and location.
5. Identify when referral is warranted.
6. Apply surgical techniques in the biopsy, removal and suturing of skin lesions.

Attending the Rural Health West Conference as well? You may be eligible for travel support for rural and remote GPs. [Find out more here](#)
