Candidate Statement: RACGP WA Faculty Council

I am seeking re-election for a second term on the RACGP WA Faculty Council to continue advocating for WA GPs and working to strengthen the future of general practice.

I have continued to work in clinical practice throughout my medical career, including over 13 years in general practice, and have been a Fellow of the RACGP since 2016.

My professional journey has been shaped by a diverse background spanning clinical and non-clinical healthcare, finance, accounting, management consulting and medical leadership, allowing me to bring a broad perspective to the RACGP and to the challenges facing general practice.

I completed the Master of Public Health / Master of Health Leadership and Management double degree with a specialisation in Health Economic Evaluation to deepen my understanding of public health and the economic drivers of healthcare. This has strengthened my ability to advocate for sustainable, evidence-based solutions that will benefit both GPs and our patients.

Through my roles on the WA GP Advisory Panel, AMA (WA) Council and AMA (WA) General Practice Group, I have contributed to discussions aimed at improving general practice.

I also have a strong commitment to education and supporting the next generation of GPs. As a medical student clinical supervisor, medical student mentor and GP registrar supervisor, I recognise the importance of strong mentorship and professional support in shaping the future of our profession.

If re-elected, I will continue to advocate for a sustainable, well-supported general practice and for policies that give GPs the tools and resources we need to deliver high-quality, equitable, GP-led, person-centred care. I am committed to driving meaningful, practical change so our profession can thrive in a changing healthcare landscape.
