This pilot workshop focuses on examination of the eye in general practice and will upskill you to manage adult and paediatric ophthalmology in primary care. In small groups, you will gain hands on experience of examining the eye and using your direct ophthalmoscope.

Eye diseases represent up to 11% of general practice presentations. GPs can examine two thirds of eye presentations with simple equipment already available in your practices.

Here is a unique opportunity to upskill in direct ophthalmoscopy and eye examination.

The workshop provides practical “tips and tricks” in adult and paediatric ophthalmology examination and management for general practitioners. You will hear directly from eye specialists and then break into small groups to practise Visual Acuity assessment, Amsler testing, direct ophthalmoscopy, eyelid eversion, cover/uncover test and more.

Learning outcomes

- Improve competence in examination and management of adults and paediatric ophthalmology
- Evaluate what is important to include in a referral letter to optometrists or ophthalmologists
- Apply techniques of direct ophthalmoscopy
- Demonstrate a confidence in eye examination including using the Amsler grid, eyelid eversion and cover/uncover test
